My Lab in IET

The Big Picture

Embedded Learning

(Some) Achievements

Outlook and To-Do's

Performance Augmentation seeks to bridge the **dissociative gap** between **abstract knowledge** and its **practical application**, researching radically new methods to connect knowing something 'in principle' to **applying** that knowledge 'in practice'.

“Almost **40 percent** of global employment is exposed to AI”

“Model simulations suggest that, with high complementarity, higher-wage earners can expect a more-than-proportional increase in their labor income, leading to an increase in labor income inequality.”

– IMF, 2024

Grace, Salvatier, Dafoe, Zhang, Evans (2017)

When will AI exceed human performance?

73%

of organisations are currently facing skills shortages. This rises to 86% of large organisations.

42%

of organisations say they have been prevented from filling roles due to lack of applicants.

72%

of organisations say skills shortages have increased workload on existing staff.

78%

of large organisations have implemented a plan relating to recruitment, their workforce or their wider impact. This compares to only 45% of micro firms with fewer than 10 employees.

54%

of organisations say they don't have initiatives, skills programmes, or adjustments for specific talent pools, including underrepresented groups. This rises to 65% of micro organisations.

31%

of organisations have seen a net change in the number of employees over the age of 50 in the last three years.

Premise of embedded learning

Information is a **logical abstractor.**

But: mnemonic form cues recall

= dissociative gap between knowledge and its practical application

deep learning requires 'disintermediation'

Actively (co-)design memorable experience

Facilitate self-determination

Support serendipity and exploratory discovery

Embedded vs traditional learning

- Cued recall
 - Context
 - Multiple perspectives
 - Multiple representations
 - Memory palace
 - Spatial cognition, participation oriented
 - Learning by experience, learning by doing
 - Embedded in practice
- Model based
 - Explicit
 - Comprehensive and absolute
 - Single best representation
 - Frame of reference
 - Multimedia, communication oriented
 - Learning by conversation, multimedia learning
 - Dedicated learning space

- Space is a pretty **extreme environment**
- Astronaut training of globally dispersed teams in classic mode takes **too long**
- Ground support from Earth **not available** or only available at specific timeframes

- More flexibility and autonomy needed
- Real-time support for joint crew training and joint authoring is needed
- Enterprise-grade ‘embedded learning’ analytics needed (for predictive capability development)

Subtitle

Description

There are many variations of passages of Lorem Ipsum available, but the majority have suffered alteration in some form, by injected humour, or randomised words which don't look even slightly believable.

If you are going to use a red box of Lorem Ipsum, you need to be sure there isn't anything embarrassing hidden in the middle of text.

All the Lorem Ipsum generators on the Internet tend to repeat predefined chunks as necessary, making this the first true generator on the Internet.

Development Insights

1. Collaborative XR-enhanced authoring:

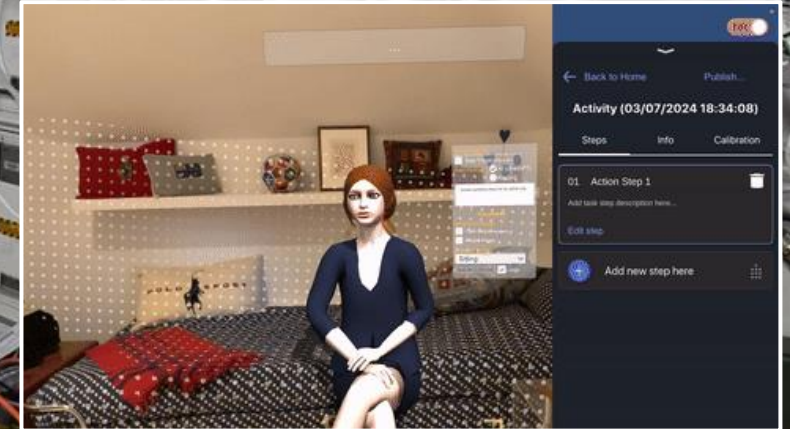

Development of procedure and training materials in a collaborative environment (Metaverse)

2. XR-enhanced live instructor support:

Crew training with real time support by instructor

3. Demi-synchronous, AI-enabled virtual instructor:

Crew training / operation with no real-time support

“The **Open XR Studios and reality-based learning** are the next logical place for The Open University to take digital education.

This is a very exciting and innovative venture for us and we hope it will lead to significant collaboration opportunities within the education sector and more widely with public and private sectors.”

KNOWHOW,
KNOW WHAT
AND
-> KNOW WHERE

Affordance Dimension	Metaconstructive Affordances Factors that can affect the attitudinal response to the technology or the task, changing the outcome.	Checking progress Visualising previous session data or learning objectives, recapping outcomes or learning progress.	Activity mapping Situating learning progress within a larger scope, such as structures that map competence, or professions.	Self-monitoring Adjusting levels of difficulty, following learning needs.	Redesigning Rearranging the tools or the interface to suit a learning style or specific objective.	Reflecting Enabling reflection on one's efficiency, learning progress or trajectory, mapping abilities to external standards.	Reinventing Creating new tools or augmentation types that better support one's learning style or objectives.
	Embodied Affordances Affordances affecting physical practice that can change the way the task is enacted.	Indicating Prompting the use of a method, tool or technique at a given location or time.	Enacting Demonstrate skill, method or tool use in situ, using glyphs or animations, trigger commands with hand actions.	Shadowing Showing relevant information as and when it is needed, live feedback on task performance, encouragement.	Mimicking Using tracking or wearables to record expert performance and show it to the learner, wearable data analysis.	Tutoring Evaluating practice based on either a gold standard or expert recording, identifying personal best performance.	Choreographing Building original learning practice based on past practice as well as flexible or adaptive learning goals.
	Propositional Affordances The potentiality arising from the use of informational elements that inform or educate the trainee.	Displaying Showing an augmentation, highlighting or drawing attention to a location or place of interest.	Manipulating Changing an object's appearance, such as its size or colour, or other property, such as its apparent weight or force.	Organising Following a set sequence or order, moving, adjusting or arranging objects in world space; pick and place.	Reasoning Deducing constants or variables from static or changing systems, isolating causes or effects.	Classifying Pattern recognition, natural language processing or classification of (inter)actions.	Generating Compiling event logs, generating summary reports of elemental data.
Learning Affordances for Performance Augmentation		Remember Retrieve relevant knowledge from long-term memory.	Understand Construct meaning from instructional messages, including oral, written and graphic communication.	Apply Carry out procedure in a given situation.	Analyse Break material into constituent parts and determine how the parts relate to one another and to an overall structure or purpose.	Evaluate Make judgements based on criteria and standards.	Create Put elements together to form a coherent whole; reorganise into a new pattern or structure.
